• ABOUT

HEY, I'M DENVER.

CLOUD NETWORK ENGINEER

I'm a cloud network engineer based in Baltimore with a background in computer networking, cloud infrastructure, and technology education. I'm originally from Jamaica and currently studying Artificial Intelligence at Johns Hopkins University.

I'm especially interested in the intersection of networking, automation, software development, and AI. I enjoy learning how these technologies can work together to solve practical problems and make complex systems easier to manage.

Outside of work and school, I'm into fitness, photography, cooking, and building personal projects. One of those projects is Fully TuFF, a simple notes-style workout app with AI features that I'm developing alongside my own fitness journey.

• PROJECTS

THINGS I'VE BUILT.

A collection of software projects I'm building while exploring Python, networking, automation, artificial intelligence, and software development.

01 / MODULE 1

PERSONAL DEVELOPER WEBSITE

A personal developer website built with Flask, HTML, and CSS for Modern Software Concepts in Python at Johns Hopkins University.

The project uses Flask Blueprints and reusable HTML templates to organize multiple pages for my biography, projects, and contact information.

LET'S CONNECT.

I'm always open to connecting with people interested in networking, cloud infrastructure, automation, artificial intelligence, and software development.
